

A Smart Choice for Multi-Family Housing Developers

Rethink Water

Metropolitan Utilities District is offering an alternative for developers of multi-family housing by eliminating the variable expense of water billing and collections. Rely on M.U.D.'s expertise and long standing relationship with our communities to provide accurate, customer friendly service by handling all water and sewer account maintenance directly with your tenants.

We've restructured our charges based on the total apartment building demand instead of per meter and size. Individual units may utilize a 5/8" meter and retrofits are included if they meet the requirements.

This **Smart Choice** will improve your net operating income, encourage conservation, increase the value of your property and free you and your staff members from labor and time intensive processes. It's time to Rethink Water.

Requirements:

All water meters must be in a central location near a service entrance for M.U.D. access.

House meters must be a minimum of 3/4".

Meters are to be purchased at M.U.D.
